Press release

TGT demonstrates commitment to the highest quality management and HSE standards

Note to Editors

About TGT Oilfield Services
TGT is a recognised leader
in oilfield measurements.
We create the world's most powerful
through-barrier diagnostic systems.

Decades of applied research and an
enduring commitment to geoscience
and technology innovation have
enabled us to harness the power of
heat, acoustic and electromagnetic
energy, to reveal deep insights
about well and reservoir dynamics.

Our customers globally trust the
critical information we provide, from
inside and far beyond the wellbore,
to ensure asset integrity and
ultimate production performance.

TGT Oilfield Services, the market leader in through-barrier diagnostic systems for the oilfield is pleased to announce that it has successfully completed the global auditing requirements for several essential quality, environmental and health & safety standards, namely ISO 9001:2015, ISO 14001:2015 and OHSAS 18001:2007.

The certifications, which were awarded following a full-scale audit by IMQ, a European leader in conformity assessments for the electrical, electronic, gas and energy industries, demonstrates TGT's commitment to the highest standards in quality management, environmental management and occupational health and safety management systems.

Commenting on the certification, Mohamed Hegazi, TGT's chief executive said, "TGT's commitment to quality, the environment and safety is integral to everything we do. Throughout our global business units, technology centre, interpretation centres and manufacturing facility, our staff take enormous pride in their work, and these ISO and OHSAS certifications will give our customers even more confidence that they are dealing with a company that rigorously adheres to the highest standards.

ISO 9001:2015 specifies requirements for a quality management system where an organisation needs to "demonstrate its ability to consistently provide products and services that meet customer and applicable statutory and regulatory requirements" and "aims to enhance customer satisfaction through the effective

application of the system." ISO 14001:2015 specifies the requirements for an environmental management system that an organisation can use to enhance its environmental performance, and OHSAS (Occupational Health and Safety Assessment Series) 18001: 2007 is an internationally applied standard for occupational health and safety management systems.
